

CANNABIS BUSINESS, BS

Program Description

The Bachelor of Science in Cannabis Business provides students with the knowledge and skills necessary to launch a business in the rapidly expanding industry related to cannabis. This program is designed for future managers, supervisors, and entrepreneurs in a cannabis enterprise. The program has at its foundation the basics of business and business management and then applies those principles to specific cannabis businesses such as cultivation facilities and dispensaries. This program is well rounded and is designed to lead to a wide range of employment opportunities. The unique issues related to state, federal, provincial and international laws are evaluated and analyzed in order to plan, develop and launch a cannabis business within legal constraints. These courses, along with the common professional business core courses, will provide students with the knowledge, training, and practical experience required to become successful small business owners, counselors, and employees.

Students are encouraged, but not required, to take elective courses in the associate program in Cannabis Science in order to augment their skills in safety and testing.

Program Learning Outcomes

- E-Marketing – Use digital, social, and mobile marketing to promote a business or product.
- Cannabis Business – Identify, describe, analyze and synthesize businesses in the cannabis industry, including, but not limited to, medicinal, cultivation, dispensary, processing, materials, testing and safety.
- Cannabis and Society – Explain, analyze and compare and contrast state, federal, provincial and international laws related to growing, distributing, selling and marketing cannabis products and describe the effects of cannabis on society.
- Cannabis Economics – Think critically and analytically about the legalization of cannabis and its effects on employment, policy and the economy.
- Cannabis Entrepreneurship – Prepare a business canvas, pitch deck and marketing plan for a startup cannabis business.
- Horticulture – Apply foundational understanding of growing and harvesting that is needed to manage a cultivation operation.
- Business Knowledge – Apply knowledge of business core subjects.
- Professional Skills – Apply skills in research, communications and critical thinking.
